### SUMMARY

Multiple vulnerabilities (also known as “NUCLEUS:13”) have been identified in the Nucleus RTOS (real-time operating system) and reported in the Siemens Security Advisory SSA-044112: <https://cert-portal.siemens.com/productcert/pdf/ssa-044112.pdf>.

The products listed below use affected versions of the Nucleus software and inherently contain these vulnerabilities.

Siemens recommends specific countermeasures for products where updates are not, or not yet available.

## **WORKAROUNDS AND MITIGATIONS**

Siemens has identified the following specific workarounds and mitigations that customers can apply to reduce the risk:

- Restrict system access to authorized personnel and follow a least privilege approach
- Disable the DHCP client and use static IP address configuration instead
- Protect network access to the affected devices with appropriate measures, e.g. firewalls, to reduce the risk
- Disable FTP on all devices
- Apply appropriate strategies for mitigation on the network level to ensure affected devices are as segmented
- Ensure that default passwords are changed
- Implement defense in depth concepts to mitigate risk of an attacker gaining access to affected devices and networks
- Please contact your local Siemens office for support

## **GENERAL SECURITY RECOMMENDATIONS**

As a general security measure Siemens strongly recommends to protect network access to affected products with appropriate mechanisms. It is advised to follow recommended security practices in order to run the devices in a protected IT environment.

## **PRODUCT DESCRIPTION**

The APOGEE MEC and the MBC are high-performance Direct Digital Control (DDC) devices and are an integral part of the APOGEE Automation System.

The APOGEE PXC Modular and Compact Series are high-performance Direct Digital Control (DDC) devices and an integral part of the APOGEE Automation System.

The TALON TC Modular and Compact Series are high-performance Direct Digital Control (DDC) devices and an integral part of the TALON Automation System.

## **VULNERABILITY CLASSIFICATION**

The vulnerability classification has been performed by using the CVSS scoring system in version 3.1 (CVSS v3.1) (<https://www.first.org/cvss/>). The CVSS environmental score is specific to the customer's environment and will impact the overall CVSS score. The environmental score should therefore be individually defined by the customer to accomplish final scoring.

An additional classification has been performed using the CWE classification, a community-developed list of common software security weaknesses. This serves as a common language and as a baseline for weakness identification, mitigation, and prevention efforts. A detailed list of CWE classes can be found at: <https://cwe.mitre.org/>.
