**SSA-179516: OpenSSL Vulnerability in Industrial Products**

**SUMMARY**

A vulnerability in OpenSSL affects several Siemens industrial products. Siemens has released updates for some affected products and is working on updates for others.

**AFFECTED PRODUCTS AND SOLUTION**

<table>
<thead>
<tr>
<th>Affected Product and Versions</th>
<th>Remediation</th>
</tr>
</thead>
<tbody>
<tr>
<td>MindConnect IoT2040: All versions &lt; V03.01</td>
<td>Install V03.01 or newer via Mindsphere web frontend</td>
</tr>
<tr>
<td>MindConnect Nano (IPC227D): All versions &lt; V03.01</td>
<td>Install V03.01 or newer via Mindsphere web frontend</td>
</tr>
<tr>
<td>SIMATIC ET 200SP Open Controller CPU 1515SP PC (incl. SIPLUS variants): All versions &gt;= V2.0 &lt; V2.1.6</td>
<td>Update to V2.1.6 <a href="https://support.industry.siemens.com/cs/us/en/view/109759122">https://support.industry.siemens.com/cs/us/en/view/109759122</a></td>
</tr>
<tr>

SIMATIC WinCC OA V3.16:
All versions < V3.16-P002
Update to V3.16-P002

SINUMERIK Integrate Access MyMachine service engineer client as part of Sinumerik Integrate Product suite:
All versions <= V4.1.7
Update to V4.1.8, installing latest Sinumerik Integrate Product suite.
The update can be obtained from your local service organization. If assistance in identifying your local service organization is required, please contact a local Siemens hotline center: https://w3.siemens.com/aspa_app

SINUMERIK Integrate Operate Client as part of Sinumerik Integrate Product suite:
All versions <= 2.0.11 / 3.0.11
Update to V2.0.12 / 3.0.12, installing latest Sinumerik Integrate Product suite.
The update can be obtained from your local service organization. If assistance in identifying your local service organization is required, please contact a local Siemens hotline center: https://w3.siemens.com/aspa_app

WORKAROUNDS AND MITIGATIONS
Siemens has identified the following specific workarounds and mitigations that customers can apply to reduce the risk:

- S7-1200: Disable web server within the device configuration if it is not used or limit access to the web server on a particular Ethernet/PROFINET port/interface if possible (setting is under General / Web server access).
- For all other affected products, limit network access using appropriate mechanisms (e.g. firewalls).
GENERAL SECURITY RECOMMENDATIONS

As a general security measure, Siemens strongly recommends to protect network access to devices with appropriate mechanisms. In order to operate the devices in a protected IT environment, Siemens recommends to configure the environment according to Siemens' operational guidelines for Industrial Security (Download: https://www.siemens.com/cert/operational-guidelines-industrial-security), and to follow the recommendations in the product manuals.

Additional information on Industrial Security by Siemens can be found at: https://www.siemens.com/industrialsecurity

PRODUCT DESCRIPTION

SIMATIC STEP 7 (TIA Portal) is an engineering software to configure and program SIMATIC controllers.

SIMATIC WinCC (TIA Portal) is an engineering software to configure and program SIMATIC Panels, SIMATIC Industrial PCs, and Standard PCs running WinCC Runtime Advanced or SCADA System WinCC Runtime Professional visualization software.

Products of the SIMATIC S7-1500 CPU family have been designed for discrete and continuous control in industrial environments such as manufacturing, food and beverages, and chemical industries worldwide.

Products of the SIMATIC S7-1200 CPU family have been designed for discrete and continuous control in industrial environments such as manufacturing, food and beverages, and chemical industries worldwide.

The client-server HMI (human machine interface) system SIMATIC WinCC Open Architecture (OA) is part of the SIMATIC HMI family. It is designed for use in applications requiring a high degree of customer-specific adaptability, large or complex applications and projects that impose specific system requirements or functions.

SINUMERIK Integrate product suite facilitates simple networking of machine tools in the IT of the production landscape.

SIMATIC S7-1500 Software Controller is a SIMATIC software controller for PC-based automation solutions.

MindConnect Nano is a Device for data acquisition via different protocols and permits the transfer of this data to MindSphere.

SIMATIC WinCC flexible panels and runtime systems are used for process visualization and control operations.

SIMATIC IPC DiagBase diagnostics software allows to recognize early on any potential faults on SIMATIC IPCs and helps to avoid or reduce system downtimes.

SIMATIC IPC DiagMonitor monitors, reports, visualizes and logs the system states of the SIMATIC IPCs. It communicates with other systems and reacts when events occur.

SIPLUS extreme products are designed for reliable operation under extreme conditions and are based on SIMATIC, LOGO!, SITOP, SINAMICS, SIMOTION, SCALANCE or other devices. SIPLUS devices use the same firmware as the product they are based on.

VULNERABILITY CLASSIFICATION

The vulnerability classification has been performed by using the CVSS scoring system in version 3.1 (CVSS v3.1) (https://www.first.org/cvss/). The CVSS environmental score is specific to the customer's environment and will impact the overall CVSS score. The environmental score should therefore be individually defined by the customer to accomplish final scoring.

An additional classification has been performed using the CWE classification, a community-developed list of common software security weaknesses. This serves as a common language and as a baseline for
weakness identification, mitigation, and prevention efforts. A detailed list of CWE classes can be found at: https://cwe.mitre.org/.

Vulnerability CVE-2017-3737

In OpenSSL 1.0.2 an “error state” mechanism was introduced. This “error state” mechanism does not work correctly if SSL_read() or SSL_write() is called directly by an application. This could result in data being sent out unencrypted by the SSL/TLS record layer.

Successful exploitation requires an attacker to cause a fatal error in the victim’s SSL/TLS handshake algorithm, and that the targeted application calls SSL_read() or SSL_write() after having already received a fatal error. No user interaction or privileges are required to exploit this security vulnerability. The vulnerability could allow to compromise confidentiality of data by transmitting it unencrypted over the network.

At the time of advisory publication no public exploitation of this security vulnerability was known.

CVSS v3.1 Base Score 5.9
CWE CWE-388: 7PK - Errors

ACKNOWLEDGMENTS

Siemens thanks the following parties for their efforts:

- Artem Zinenko from Kaspersky for pointing out that SIPLUS should also be mentioned

ADDITIONAL INFORMATION

HISTORY DATA

V1.0 (2018-08-07): Publication Date
V1.1 (2018-09-11): Added WinCC OA patches, removed OC1 variant indicator as F is also affected
V1.2 (2018-10-09): Added update for SIMATIC S7-1200 CPU, SIMATIC STEP 7 (TIA Portal) V13, SIMATIC WinCC (TIA Portal) V13
V1.3 (2018-11-13): Added update for SIMATIC HMI WinCC Flexible, SIMATIC IPC DiagMonitor
V1.4 (2019-02-12): Added update for SIMATIC S7-1500 Software Controller, SIMATIC ET 200SP Open Controller CPU 1515SP PC
V1.5 (2019-04-09): Added update for SIMATIC IPC DiagBase and SIMATIC WinCC (TIA Portal) V14
V1.6 (2020-02-10): SIPLUS devices now explicitly mentioned in the list of affected products

TERMS OF USE

Siemens Security Advisories are subject to the terms and conditions contained in Siemens’ underlying license terms or other applicable agreements previously agreed to with Siemens (hereinafter “License Terms”). To the extent applicable to information, software or documentation made available in or through a Siemens Security Advisory, the Terms of Use of Siemens’ Global Website (https://www.siemens.com/terms_of_use, hereinafter "Terms of Use"), in particular Sections 8-10 of the Terms of Use, shall apply additionally. In case of conflicts, the License Terms shall prevail over the Terms of Use.
