### **SUMMARY**

Security researchers published information on vulnerabilities known as Foreshadow and L1 Terminal Fault (L1TF). These vulnerabilities affect many modern processors from different vendors to a varying degree.

Several Siemens Industrial Products contain processors that are affected by the vulnerabilities.

### **AFFECTED PRODUCTS AND SOLUTION**

For SIMATIC IPCs, SIMATIC Field PGs, SIMATIC ITP devices, SIMOTION P and SINUMERIK PCUs: Siemens provides the first BIOS updates that include chipset microcode updates, and is working on further updates. In addition to applying the available BIOS updates, customers must also install the operating system patches that are provided by the operating system vendors in order to mitigate the vulnerabilities. Depending on the deployed operating system version, additional steps may be required to enable the mitigations. Please see operating system documentation for details.

## **WORKAROUNDS AND MITIGATIONS**

Siemens has identified the following specific workarounds and mitigations that customers can apply to reduce the risk:

- As a prerequisite for an attack, an attacker must be able to run untrusted code on affected systems.

Siemens recommends limiting the possibilities to run untrusted code if possible.

- Applying a Defense-in-Depth concept can help to reduce the probability that untrusted code is run on the system. Siemens recommends to apply the Defense-in-Depth concept: <https://www.siemens.com/industrialsecurity>

## **GENERAL SECURITY RECOMMENDATIONS**

As a general security measure, Siemens strongly recommends to protect network access to devices with appropriate mechanisms. In order to operate the devices in a protected IT environment, Siemens recommends to configure the environment according to Siemens' operational guidelines for Industrial Security (Download: <https://www.siemens.com/cert/operational-guidelines-industrial-security>), and to follow the recommendations in the product manuals.

## **PRODUCT DESCRIPTION**

RUGGEDCOM APE serves as a utility-grade computing platform for the RUGGEDCOM RX1500 router family. It also allows to run third party software applications without needing to procure an external industrial PC.

As the virtual machine environment for the RUGGEDCOM RX1400, the RUGGEDCOM VPE1400 is ideally suited for harsh environments, such as those found in electric power, transportation, defense systems and oil and gas industries.

The SIMATIC ET 200SP Open Controller is a PC-based version of the SIMATIC S7-1500 Controller including optional visualization in combination with central I/Os in a compact device.

SIMATIC Industrial PCs are the PC hardware platform for PC-based Automation from Siemens.

SIMATIC S7-1500 Software Controller is a SIMATIC software controller for PC-based automation solutions.

The SIMATIC S7-1500 ODK CPUs provide functionality of standard S7-1500 CPUs but additionally provide the possibility to run C/C++ Code within the CPU-Runtime for execution of own functions / algorithms implemented in C/C++. They have been designed for discrete and continuous control in industrial environments such as manufacturing, food and beverages, and chemical industries worldwide.

The SIMATIC S7-1500 MFP CPUs provide functionality of standard S7-1500 CPUs with the possibility to run C/C++ Code within the CPU-Runtime for execution of own functions / algorithms implemented in C/C++ and an additional second independent runtime environment to execute C/C++ applications parallel to the Step 7 program if required.

SIMOTION is a scalable high performance hardware and software system for motion control.

SINEMA Remote Connect ensures management of secure connections (VPN) between headquarters, service technicians and the installed machines or plants.

SINUMERIK CNC offers automation solutions for the shop floor, job shops and large serial production environments.

SINUMERIK Panel Control Unit (PCU) offers HMI functionality for SINUMERIK CNC controllers.

SINUMERIK Thin Client Unit (TCU) offers HMI functionality for SINUMERIK CNC controllers.

## **VULNERABILITY CLASSIFICATION**

The vulnerability classification has been performed by using the CVSS scoring system in version 3.0 (CVSS v3.0) (<https://www.first.org/cvss/>). The CVSS environmental score is specific to the customer's environment and will impact the overall CVSS score. The environmental score should therefore be

individually defined by the customer to accomplish final scoring.
