SSA-350757: Improper Access Control Vulnerability in TIA Portal Affecting S7-1200 and S7-1500 CPUs Web Server (Incl. Related ET200 CPUs and SIPLUS variants)

Publication Date: 2022-04-12
Last Update: 2022-04-12
Current Version: V1.0
CVSS v3.1 Base Score: 6.4

SUMMARY
An attacker could achieve privilege escalation on the web server of certain devices configured by SIMATIC STEP 7 (TIA Portal) due to incorrect handling of the webserver's user management configuration during downloading. This only affects the S7-1200 and S7-1500 CPUs' (incl. related ET200 CPUs and SIPLUS variants) web server, when activated.

Siemens has released updates for several affected products and recommends to update to the latest versions. Siemens recommends specific countermeasures for products where updates are not, or not yet available.

AFFECTED PRODUCTS AND SOLUTION

| SIMATIC STEP 7 (TIA Portal) V15: All versions | Currently no fix is planned  
See recommendations from section Workarounds and Mitigations |
| SIMATIC STEP 7 (TIA Portal) V16: All versions < V16 Update 5 | Update to V16 Update 5 or later version  
See further recommendations from section Workarounds and Mitigations |
| SIMATIC STEP 7 (TIA Portal) V17: All versions < V17 Update 2 | Update to V17 Update 2 or later version  
See further recommendations from section Workarounds and Mitigations |

WORKAROUNDS AND MITIGATIONS
Siemens has identified the following specific workarounds and mitigations that customers can apply to reduce the risk:

- Whenever changes of the web server’s user configuration are performed with one of the affected versions for S7-1200 or S7-1500 CPUs (incl. related ET200 CPUs and SIPLUS variants), validate web server permissions for unauthenticated users by directly accessing the web server in an unauthenticated manner. In case unauthenticated access is unintentionally possible, the web server's user configuration needs to be removed and reconfigured again using a TIA-Portal V16 Update 5 or V17 Update 2 or later.
- In case a new TIA-Portal version is not available, updating the web server’s user configuration is not effective in this situation. Instead
  - the PLC must be deleted and reconfigured with a new project. **Warning:** The PLC-program should be copied before deleting the PLC. Or
- the original project (one that was not uploaded by a PLC) should be used to update the web server's user management and to download the changed configuration

Product specific remediations or mitigations can be found in the section **Affected Products and Solution**. Please follow the **General Security Recommendations**.

**GENERAL SECURITY RECOMMENDATIONS**

As a general security measure, Siemens strongly recommends to protect network access to devices with appropriate mechanisms. In order to operate the devices in a protected IT environment, Siemens recommends to configure the environment according to Siemens' operational guidelines for Industrial Security (Download: [https://www.siemens.com/cert/operational-guidelines-industrial-security](https://www.siemens.com/cert/operational-guidelines-industrial-security)), and to follow the recommendations in the product manuals.

Additional information on Industrial Security by Siemens can be found at: [https://www.siemens.com/industrialsecurity](https://www.siemens.com/industrialsecurity)

**PRODUCT DESCRIPTION**

SIMATIC STEP 7 (TIA Portal) is an engineering software to configure and program SIMATIC controllers.

**VULNERABILITY CLASSIFICATION**

The vulnerability classification has been performed by using the CVSS scoring system in version 3.1 (CVSS v3.1) ([https://www.first.org/cvss/](https://www.first.org/cvss/)). The CVSS environmental score is specific to the customer’s environment and will impact the overall CVSS score. The environmental score should therefore be individually defined by the customer to accomplish final scoring.

An additional classification has been performed using the CWE classification, a community-developed list of common software security weaknesses. This serves as a common language and as a baseline for weakness identification, mitigation, and prevention efforts. A detailed list of CWE classes can be found at: [https://cwe.mitre.org/](https://cwe.mitre.org/).

**Vulnerability CVE-2021-42029**

An attacker could achieve privilege escalation on the web server of certain devices due to improper access control vulnerability in the engineering system software. The attacker needs to have direct access to the impacted web server.

TERMS OF USE

Siemens Security Advisories are subject to the terms and conditions contained in Siemens’ underlying license terms or other applicable agreements previously agreed to with Siemens (hereinafter “License Terms”). To the extent applicable to information, software or documentation made available in or through a Siemens Security Advisory, the Terms of Use of Siemens’ Global Website (https://www.siemens.com/terms_of_use, hereinafter “Terms of Use”), in particular Sections 8-10 of the Terms of Use, shall apply additionally. In case of conflicts, the License Terms shall prevail over the Terms of Use.
