SSA-428051: Privilege Escalation Vulnerability in TIA Administrator

Publication Date: 2021-02-09  
Last Update: 2021-02-09  
Current Version: V1.0  
CVSS v3.1 Base Score: 7.8

SUMMARY

The latest update for TIA Administrator, installed together with TIA Portal and PCS neo, fixes a privilege escalation vulnerability that could allow local users to escalate privileges and execute code as local SYSTEM user.

Siemens has released an update for TIA Portal and recommends that customers update to the latest version. Siemens is preparing further updates and recommends specific countermeasures until fixes are available.

AFFECTED PRODUCTS AND SOLUTION

</tr>
</tbody>
</table>

WORKAROUNDS AND MITIGATIONS

Siemens has identified the following specific workarounds and mitigations that customers can apply to reduce the risk:

- Restrict local access to authorized users.

GENERAL SECURITY RECOMMENDATIONS

As a general security measure, Siemens strongly recommends to protect network access to devices with appropriate mechanisms. In order to operate the devices in a protected IT environment, Siemens recommends to configure the environment according to Siemens’ operational guidelines for Industrial Security (Download: [https://www.siemens.com/cert/operational-guidelines-industrial-security](https://www.siemens.com/cert/operational-guidelines-industrial-security)), and to follow the recommendations in the product manuals.

Additional information on Industrial Security by Siemens can be found at: [https://www.siemens.com/industrialsecurity](https://www.siemens.com/industrialsecurity)

PRODUCT DESCRIPTION

The Totally Integrated Automation Portal (TIA Portal) is a PC software that provides access to the complete range of Siemens digitalized automation services, from digital planning and integrated engineering to transparent operation.
SIMATIC PCS neo is a distributed control system (DCS).

TIA Administrator is a web-based framework that can incorporate different function modules for administrative tasks, as well as functions for managing SIMATIC software and licenses.

**VULNERABILITY CLASSIFICATION**

The vulnerability classification has been performed by using the CVSS scoring system in version 3.1 (CVSS v3.1) (https://www.first.org/cvss/). The CVSS environmental score is specific to the customer's environment and will impact the overall CVSS score. The environmental score should therefore be individually defined by the customer to accomplish final scoring.

An additional classification has been performed using the CWE classification, a community-developed list of common software security weaknesses. This serves as a common language and as a baseline for weakness identification, mitigation, and prevention efforts. A detailed list of CWE classes can be found at: https://cwe.mitre.org/.

Vulnerability CVE-2020-25238

Manipulating certain files in specific folders could allow a local attacker to execute code with SYSTEM privileges.

The security vulnerability could be exploited by an attacker with a valid account and limited access rights on the system.

- **CVSS v3.1 Base Score**: 7.8
- **CWE**: CWE-284: Improper Access Control

**ACKNOWLEDGMENTS**

Siemens thanks the following parties for their efforts:

- Will Dormann from CERT Coordination Center (CERT/CC) for coordinated disclosure

**TERMS OF USE**

Siemens Security Advisories are subject to the terms and conditions contained in Siemens’ underlying license terms or other applicable agreements previously agreed to with Siemens (hereinafter “License Terms”). To the extent applicable to information, software or documentation made available in or through a Siemens Security Advisory, the Terms of Use of Siemens’ Global Website (https://www.siemens.com/terms_of_use, hereinafter “Terms of Use”), in particular Sections 8-10 of the Terms of Use, shall apply additionally. In case of conflicts, the License Terms shall prevail over the Terms of Use.
