**SSA-487246: Vulnerabilities in SIMATIC HMI Devices**

**Publication Date:** 2015-04-08  
**Last Update:** 2020-02-10  
**Current Version:** V1.3  
**CVSS v3.1 Base Score:** 8.1

**SUMMARY**

The latest updates for the affected products fix three vulnerabilities. The most severe of these vulnerabilities could allow an attacker to perform a Denial-of-Service attack against HMI panels under certain conditions.

**AFFECTED PRODUCTS AND SOLUTION**

**WORKAROUNDS AND MITIGATIONS**

Siemens has identified the following specific workarounds and mitigations that customers can apply to reduce the risk:

- Apply cell protection concept (see [https://www.siemens.com/cert/operational-guidelines-industrial-security](https://www.siemens.com/cert/operational-guidelines-industrial-security))
- Use VPN for protecting network communication between cells
**GENERAL SECURITY RECOMMENDATIONS**

As a general security measure, Siemens strongly recommends to protect network access to devices with appropriate mechanisms. In order to operate the devices in a protected IT environment, Siemens recommends to configure the environment according to Siemens’ operational guidelines for Industrial Security (Download: [https://www.siemens.com/cert/operational-guidelines-industrial-security](https://www.siemens.com/cert/operational-guidelines-industrial-security)), and to follow the recommendations in the product manuals.

Additional information on Industrial Security by Siemens can be found at: [https://www.siemens.com/industrialsecurity](https://www.siemens.com/industrialsecurity)

**PRODUCT DESCRIPTION**

SIMATIC HMI Panels, SIMATIC WinCC Runtime Advanced, and SIMATIC WinCC Runtime Professional are used for operator control and monitoring of machines and plants.

SIMATIC NET PC-Software is required for communication between controller (SIMATIC S7 controller) and PC based solutions (e.g. SIMATIC WinCC).

SIMATIC WinCC is a supervisory control and data acquisition (SCADA) system. It is used to monitor and control physical processes involved in industry and infrastructure on a large scale and over long distances.

SIMATIC Automation Tool allows commissioning, adjusting and service in combination with S7-1200 and S7-1500 Controllers without engineering framework.

SIPLUS extreme products are designed for reliable operation under extreme conditions and are based on SIMATIC, LOGO!, SITOP, SINAMICS, SIMOTION, SCALANCE or other devices. SIPLUS devices use the same firmware as the product they are based on.

**VULNERABILITY CLASSIFICATION**

The vulnerability classification has been performed by using the CVSS scoring system in version 3.1 (CVSS v3.1) ([https://www.first.org/cvss/](https://www.first.org/cvss/)). The CVSS environmental score is specific to the customer’s environment and will impact the overall CVSS score. The environmental score should therefore be individually defined by the customer to accomplish final scoring.

An additional classification has been performed using the CWE classification, a community-developed list of common software security weaknesses. This serves as a common language and as a baseline for weakness identification, mitigation, and prevention efforts. A detailed list of CWE classes can be found at: [https://cwe.mitre.org/](https://cwe.mitre.org/).

**Vulnerability CVE-2015-1601**

Attackers with access to the network path between PLCs and their communication partners could possibly intercept or modify Siemens industrial communications at port 102/tcp and conduct a Man-in-the-Middle attack. This vulnerability affects all listed products.

Vulnerability CVE-2015-2822

Attackers with access to the network path between an HMI panel and a PLC (Man-in-the-Middle) could possibly conduct a Denial-of-Service attack against the HMI panel by sending specially crafted packets to the HMI (port 102/tcp). This vulnerability affects SIMATIC WinCC Comfort Panels and SIMATIC WinCC Runtime Advanced.

Vulnerability CVE-2015-2823

If attackers obtain password hashes for SIMATIC WinCC users, they could possibly use the hashes to authenticate themselves. This vulnerability affects SIMATIC WinCC.

ACKNOWLEDGMENTS

Siemens thanks the following parties for their efforts:

- Quarkslab team for coordinated disclosure of CVE-2015-1601 and CVE-2015-2822
- Ilya Karpov from Positive Technologies for coordinated disclosure of CVE-2015-2823
- Artem Zinenko from Kaspersky for pointing out that SIPLUS should also be mentioned

ADDITIONAL INFORMATION

HISTORY DATA

V1.0 (2015-04-08): Publication Date
V1.1 (2015-07-21): Added update information for SIMATIC HMI Basic Panels 1st Generation (WinCC TIA Portal), SIMATIC HMI Mobile Panel 277 (WinCC TIA Portal), and SIMATIC HMI Multi Panels (WinCC TIA Portal)
V1.2 (2015-08-27): Added updates for TIA V12 SP1 devices and WinCC V7.2
V1.3 (2020-02-10): SIPLUS devices now explicitly mentioned in the list of affected products

TERMS OF USE

Siemens Security Advisories are subject to the terms and conditions contained in Siemens’ underlying license terms or other applicable agreements previously agreed to with Siemens (hereinafter "License Terms"). To the extent applicable to information, software or documentation made available in or through a Siemens Security Advisory, the Terms of Use of Siemens’ Global Website (https://www.siemens.com/terms_of_use, hereinafter "Terms of Use"), in particular Sections 8-10 of the Terms of Use, shall apply.
additionally. In case of conflicts, the License Terms shall prevail over the Terms of Use.
