SSA-541018: Embedded TCP/IP Stack Vulnerabilities (AMNESIA:33) in SENTRON PAC / 3VA Devices (Part 2)

Summary

Security researchers discovered and disclosed 33 vulnerabilities in several open-source TCP/IP stacks for embedded devices, also known as “AMNESIA:33” vulnerabilities.

This advisory describes the impact of two of these vulnerabilities (CVE-2020-13987, CVE-2020-17437) to Siemens products.

Siemens has released updates for several affected products and recommends to update to the latest versions. Siemens recommends specific countermeasures for products where updates are not available.

The impact of another “AMNESIA:33” vulnerability (CVE-2020-13988) is described in Siemens Security Advisory SSA-541017.

Affected Products and Solution

Siemens Security Advisory by Siemens ProductCERT

SENTRON PAC3200:
All versions < V2.4.7
Update to V2.4.7 or later version
See further recommendations from section Workarounds and Mitigations

SENTRON PAC3200T:
All versions < V3.2.2
only affected by CVE-2020-17437
Update to V3.2.2 or later version
See further recommendations from section Workarounds and Mitigations

SENTRON PAC3220:
All versions < V3.2.0
only affected by CVE-2020-17437
Update to V3.2.0 or later version
See further recommendations from section Workarounds and Mitigations

SENTRON PAC4200:
All versions < V2.3.0
Update to V2.3.0 or later version
See further recommendations from section Workarounds and Mitigations

WORKAROUNDS AND MITIGATIONS
Siemens has identified the following specific workarounds and mitigations that customers can apply to reduce the risk:

• For successful exploitation, an attacking system must be located in the same Modbus TCP segment as a vulnerable device. Therefore ensure that only trusted systems are attached to that segment and only trusted persons have access.

GENERAL SECURITY RECOMMENDATIONS
As a general security measure, Siemens strongly recommends to protect network access to devices with appropriate mechanisms. In order to operate the devices in a protected IT environment, Siemens recommends to configure the environment according to Siemens’ operational guidelines for Industrial Security (Download: https://www.siemens.com/cert/operational-guidelines-industrial-security), and to follow the recommendations in the product manuals.

Additional information on Industrial Security by Siemens can be found at: https://www.siemens.com/industrialsecurity

PRODUCT DESCRIPTION
SENTRON PAC Meter products are power measuring devices for precise energy management and transparent information acquisition.

The SENTRON 3VA COM100/COM800 breaker data server is used as a gateway and enables communication between 3VA MCCB (Molded Case Circuit Breaker) devices and automation systems.

The SENTRON 3VA DSP800 display device is used to display values retrieved from 3VA MCCB (Molded Case Circuit Breaker) devices.

VULNERABILITY CLASSIFICATION
The vulnerability classification has been performed by using the CVSS scoring system in version 3.1 (CVSS v3.1) (https://www.first.org/cvss/). The CVSS environmental score is specific to the customer's
environment and will impact the overall CVSS score. The environmental score should therefore be individually defined by the customer to accomplish final scoring.

An additional classification has been performed using the CWE classification, a community-developed list of common software security weaknesses. This serves as a common language and as a baseline for weakness identification, mitigation, and prevention efforts. A detailed list of CWE classes can be found at: https://cwe.mitre.org/.

**Vulnerability CVE-2020-13987**

The TCP/IP stack (uIP) in affected devices is vulnerable to out-of-bounds read when calculating the checksum for IP packets. (FSCT-2020-0009)

An attacker located in the same network could trigger a Denial-of-Service condition on the device by sending a specially crafted IP packet.

<table>

<td>CWE</td>
<td>CWE-125: Out-of-bounds Read</td>
</tr>
</tbody>
</table>

**Vulnerability CVE-2020-17437**

The TCP/IP stack (uIP) in affected devices is vulnerable to out-of-bounds write when processing TCP packets with urgent pointer (URG) where the location of the TCP data payload is calculated improperly. (FSCT-2020-0018)

An attacker located in the same network could trigger a Denial-of-Service condition on the device by sending a specially crafted IP packet.

**ACKNOWLEDGMENTS**

Siemens thanks the following parties for their efforts:

- Cybersecurity and Infrastructure Security Agency (CISA) for coordination efforts
- CERT Coordination Center (CERT/CC) for coordination efforts
- Daniel dos Santos, Jos Wetzels, and Amine Amri from Forescout Technologies for coordinated disclosure

**ADDITIONAL INFORMATION**

Impact of other “AMNESIA:33” vulnerabilities to Siemens products:

- Siemens Security Advisory SSA-541017

For more details regarding the AMNESIA:33 vulnerabilities in embedded TCP/IP stacks refer to:

- Forescout Publication “AMNESIA:33”
- CERT/CC Advisory VU#815128
- CISA Industrial Control Systems Advisory ICSA-20-343-01

HISTORY DATA

V1.0 (2021-03-09): Publication Date
V1.1 (2021-05-11): Added download link of update version for SENTRON PAC3220
V1.2 (2021-08-10): Added solution for SENTRON 3VA COM100/800 and DSP800
V1.3 (2021-10-12): Added solution for PAC3200T
V1.4 (2022-02-08): Added solution for SENTRON PAC2200 (with and without MID approval)
V1.5 (2022-03-08): Added download link of update version for SENTRON PAC2200

TERMS OF USE

Siemens Security Advisories are subject to the terms and conditions contained in Siemens’ underlying license terms or other applicable agreements previously agreed to with Siemens (hereinafter "License Terms"). To the extent applicable to information, software or documentation made available in or through a Siemens Security Advisory, the Terms of Use of Siemens’ Global Website (https://www.siemens.com/terms_of_use, hereinafter "Terms of Use"), in particular Sections 8-10 of the Terms of Use, shall apply additionally. In case of conflicts, the License Terms shall prevail over the Terms of Use.
