SSA-705111: Vulnerabilities (NAME:WRECK) in DNS Module of Nucleus Products

Publication Date: 2021-04-13
Last Update: 2021-04-13
Current Version: V1.0
CVSS v3.1 Base Score: 6.5

SUMMARY

Security researchers discovered and disclosed 9 vulnerabilities in several DNS implementations, also known as “NAME:WRECK” vulnerabilities. The vulnerabilities described in this advisories are from this set.

The DNS client of affected products contains multiple vulnerabilities related to the handling of DNS responses and requests. The most severe could allow an attacker to manipulate the DNS responses and cause a denial-of-service condition.

Siemens has released updates for several affected products and recommends to update to the latest versions. Siemens is preparing updates and recommends specific countermeasures for products where updates are not, or not yet available.

AFFECTED PRODUCTS AND SOLUTION

<table>
<thead>
<tr>
<th>Affected Product and Versions</th>
<th>Remediation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nucleus 4: All versions &lt; V4.1.0</td>
<td>Update to V4.1.0 or later version <a href="https://support.sw.siemens.com/en-US/product/1336134128/">link</a> (login required)</td>
</tr>
<tr>
<td>Nucleus NET: All versions</td>
<td>See recommendations from Section Workarounds and Mitigations or upgrade to the latest versions of Nucleus ReadyStart or Nucleus 4</td>
</tr>
<tr>
<td>Nucleus RTOS: versions including affected DNS modules</td>
<td>Contact customer support to receive patch and update information</td>
</tr>
<tr>
<td>Nucleus ReadyStart: All versions &lt; V2017.02.3</td>
<td>Update to V2017.02.3 or later version <a href="https://support.sw.siemens.com/en-US/product/1009925838/">link</a> (login required)</td>
</tr>
<tr>
<td>Nucleus ReadyStart: All versions &gt;= V2017.02.3 only affected by CVE-2021-25677</td>
<td>See recommendations from section Workarounds and Mitigations</td>
</tr>
<tr>
<td>Nucleus Source Code: versions including affected DNS modules</td>
<td>Contact customer support to receive patch and update information</td>
</tr>
<tr>
<td>VSTAR: versions including affected DNS modules</td>
<td>Contact customer support to receive patch and update information</td>
</tr>
</tbody>
</table>
WORKAROUNDS AND MITIGATIONS

Siemens has identified the following specific workarounds and mitigations that customers can apply to reduce the risk:

- Avoid using DNS client of affected versions
- For additional mitigation advice please contact customer support or your local Nucleus Sales team

GENERAL SECURITY RECOMMENDATIONS

As a general security measure, Siemens strongly recommends to protect network access to devices with appropriate mechanisms. In order to operate the devices in a protected IT environment, Siemens recommends to configure the environment according to Siemens’ operational guidelines for Industrial Security (Download: https://www.siemens.com/cert/operational-guidelines-industrial-security), and to follow the recommendations in the product manuals.

Additional information on Industrial Security by Siemens can be found at: https://www.siemens.com/industrialsecurity

PRODUCT DESCRIPTION

Nucleus NET module incorporates a wide range of standard-compliant networking and communication protocols, drivers, and utilities to deliver full-featured network support in any embedded device. The networking functionality is fully integrated into the Nucleus RTOS and supports a variety of processors and MCUs.

The Nucleus RTOS provides a highly scalable micro-kernel based real-time operating system designed for scalability and reliability in systems spanning the range of aerospace, industrial, and medical applications.

VSTAR is a complete AUTOSAR 4 based ECU solution providing the tools and embedded software for on-time product deployment. The VSTAR implementation enables scalable support from resource limited small ECUs to powerful multi core solutions. The VSTAR modules developed according to ISO 26262 requirements can be used to address up to and including ASIL D use-cases.

Nucleus ReadyStart is a platform with integrated software IP, tools, and services ideal for applications where a small footprint, deterministic performance, and small code size are essential.

VULNERABILITY CLASSIFICATION

The vulnerability classification has been performed by using the CVSS scoring system in version 3.1 (CVSS v3.1) (https://www.first.org/cvss/). The CVSS environmental score is specific to the customer’s environment and will impact the overall CVSS score. The environmental score should therefore be individually defined by the customer to accomplish final scoring.

An additional classification has been performed using the CWE classification, a community-developed list of common software security weaknesses. This serves as a common language and as a baseline for weakness identification, mitigation, and prevention efforts. A detailed list of CWE classes can be found at: https://cwe.mitre.org/.
Vulnerability CVE-2020-27736

The DNS domain name label parsing functionality does not properly validate the null-terminated name in DNS-responses. The parsing of malformed responses could result in a read past the end of an allocated structure. An attacker with a privileged position in the network could leverage this vulnerability to cause a denial-of-service condition or leak the read memory.

CVSS v3.1 Base Score 6.5
CWE CWE-170: Improper Null Termination

Vulnerability CVE-2020-27737

The DNS response parsing functionality does not properly validate various length and counts of the records. The parsing of malformed responses could result in a read past the end of an allocated structure. An attacker with a privileged position in the network could leverage this vulnerability to cause a denial-of-service condition or leak the memory past the allocated structure.

CVSS v3.1 Base Score 6.5
CWE CWE-125: Out-of-bounds Read

Vulnerability CVE-2020-27738

The DNS domain name record decompression functionality does not properly validate the pointer offset values. The parsing of malformed responses could result in a read access past the end of an allocated structure. An attacker with a privileged position in the network could leverage this vulnerability to cause a denial-of-service condition.

CVSS v3.1 Base Score 6.5
CWE CWE-788: Access of Memory Location After End of Buffer

Vulnerability CVE-2021-25677

The DNS client does not properly randomize DNS transaction IDs. That could allow an attacker to poison the DNS cache or spoof DNS resolving.

CVSS v3.1 Base Score 5.3
CWE CWE-330: Use of Insufficiently Random Values

ACKNOWLEDGMENTS

Siemens thanks the following parties for their efforts:

• Daniel dos Santos from Forescout Technologies Inc. for coordinated disclosure

ADDITIONAL INFORMATION

Some products that include the Nucleus products are also affected as in SSA-669158.

TERMS OF USE

Siemens Security Advisories are subject to the terms and conditions contained in Siemens' underlying license terms or other applicable agreements previously agreed to with Siemens (hereinafter "License Terms"). To the extent applicable to information, software or documentation made available in or through a Siemens Security Advisory, the Terms of Use of Siemens' Global Website (https://www.siemens.com/terms_of_use, hereinafter "Terms of Use"), in particular Sections 8-10 of the Terms of Use, shall apply additionally. In case of conflicts, the License Terms shall prevail over the Terms of Use.
