SSA-875726: Privilege Escalation Vulnerability in Mendix

Summary

The latest updates for Mendix fix a vulnerability in Mendix Applications that could allow malicious authorized users to escalate their privileges.

Mendix has released an update for Mendix and recommends to update to the latest version.

Affected Products and Solution

Workarounds and Mitigations

Siemens has identified the following specific workarounds and mitigations that customers can apply to reduce the risk:

- Remove the privilege to manage user roles for non-administrative roles to mitigate this vulnerability for non-administrative users

General Security Recommendations

As a general security measure, Siemens strongly recommends to protect network access to devices with appropriate mechanisms. In order to operate the devices in a protected IT environment, Siemens
Siemens recommends to configure the environment according to Siemens’ operational guidelines for Industrial Security (Download: https://www.siemens.com/cert/operational-guidelines-industrial-security), and to follow the recommendations in the product manuals.

Additional information on Industrial Security by Siemens can be found at: https://www.siemens.com/industrialsecurity

**PRODUCT DESCRIPTION**

Mendix is a high productivity app platform that enables you to build and continuously improve mobile and web applications at scale. The Mendix Platform is designed to accelerate enterprise app delivery across your entire application development lifecycle, from ideation to deployment and operations.

**VULNERABILITY CLASSIFICATION**

The vulnerability classification has been performed by using the CVSS scoring system in version 3.1 (CVSS v3.1) (https://www.first.org/cvss/). The CVSS environmental score is specific to the customer’s environment and will impact the overall CVSS score. The environmental score should therefore be individually defined by the customer to accomplish final scoring.

An additional classification has been performed using the CWE classification, a community-developed list of common software security weaknesses. This serves as a common language and as a baseline for weakness identification, mitigation, and prevention efforts. A detailed list of CWE classes can be found at: https://cwe.mitre.org/.

Vulnerability CVE-2021-27394

Authenticated, non-administrative users could modify their privileges by manipulating the user role under certain circumstances, allowing them to gain administrative privileges.

- CVSS v3.1 Base Score: 8.1
- CWE: CWE-269: Improper Privilege Management

**ACKNOWLEDGMENTS**

Siemens thanks the following parties for their efforts:

- FlowFabric BV for coordinated disclosure
