SSA-936080: Multiple Vulnerabilities in Third-Party Component libcurl

Publication Date: 2021-03-09
Last Update: 2021-05-11
Current Version: V1.1
CVSS v3.1 Base Score: 7.5

SUMMARY

SIMATIC NET CM 1542-1, SCALANCE SC600 family and SIMATIC NET CP 343-1 Advanced devices are vulnerable to a vulnerability in the third party component libcurl that could allow an attacker to cause a Denial-of-Service condition on the affected devices.

Siemens has released an update for SCALANCE SC600. For the remaining affected product, Siemens is preparing further updates and recommends specific countermeasures until fixes are available.

The impact of additional libcurl vulnerabilities is described in Siemens Security Advisory SSA-436177.

</table>

WORKAROUNDS AND MITIGATIONS

Siemens has identified the following specific workarounds and mitigations that customers can apply to reduce the risk:

- Disable the SMTP Client function on affected devices or use VPN for protecting SMTP traffic to trusted email servers only

GENERAL SECURITY RECOMMENDATIONS

As a general security measure, Siemens strongly recommends to protect network access to devices with appropriate mechanisms. In order to operate the devices in a protected IT environment, Siemens recommends to configure the environment according to Siemens’ operational guidelines for Industrial Security (Download: https://www.siemens.com/cert/operational-guidelines-industrial-security), and to follow the recommendations in the product manuals.

Additional information on Industrial Security by Siemens can be found at: https://www.siemens.com/industrialsecurity
PRODUCT DESCRIPTION

The SIMATIC NET CM 1542-1 communication module is used to connect S7-1500 controllers to PROFINET as IO-Controller.

Communication Processor (CP) modules of families SIMATIC NET CP 343-1 and CP 443-1 have been designed to enable SIMATIC S7-300/S7-400 CPUs for Ethernet communication.

VULNERABILITY CLASSIFICATION

The vulnerability classification has been performed by using the CVSS scoring system in version 3.1 (CVSS v3.1) (https://www.first.org/cvss/). The CVSS environmental score is specific to the customer’s environment and will impact the overall CVSS score. The environmental score should therefore be individually defined by the customer to accomplish final scoring.

An additional classification has been performed using the CWE classification, a community-developed list of common software security weaknesses. This serves as a common language and as a baseline for weakness identification, mitigation, and prevention efforts. A detailed list of CWE classes can be found at: https://cwe.mitre.org/.

Vulnerability CVE-2019-3823

The libcurl library versions 7.34.0 to and including 7.63.0 are vulnerable to a heap out-of-bounds read in the code handling the end-of-response for SMTP.

This vulnerability could allow an attacker to trigger a Denial-of-Service condition on the affected devices.

HISTORY DATA

V1.0 (2021-03-09): Publication Date
V1.1 (2021-05-11): Added SIMATIC CP343-1 Advanced (incl. SIPLUS variants) to the list of affected products

TERMS OF USE

Siemens Security Advisories are subject to the terms and conditions contained in Siemens’ underlying license terms or other applicable agreements previously agreed to with Siemens (hereinafter "License Terms"). To the extent applicable to information, software or documentation made available in or through a Siemens Security Advisory, the Terms of Use of Siemens' Global Website (https://www.siemens.com/terms_of_use, hereinafter "Terms of Use"), in particular Sections 8-10 of the Terms of Use, shall apply additionally. In case of conflicts, the License Terms shall prevail over the Terms of Use.
